

We're very excited to have you stay with us at Three Tree Hill & understand your concerns about the possible intermittent lack of power during your visit.

Whilst we would ideally love to be operating our lodge entirely on renewable energy, this is unfortunately not within our means at this time.

Instead, we have implemented a number of features to make your stay more comfortable during the darker hours:

1. Schedule Information

Our friendly lodge hosts will update you daily on the LOAD-SHEDDING schedule. This will give you time to plan your energy-use accordingly. (So you don't get caught with wet hair & no dryer!) Or, alternatively download the ESP **EskomSePush** app from the Play Store (for FREE) on your mobile phone. Select **Rangeworthy (7)** for Your Area to receive notifications.

2. Emergency Lighting

Each of the guest rooms have a 650 lumen emergency LED lamp (which lasts for 6 hours from a single charge) and also has a USB port for emergency phone re-charging. This, together with a pocket-size solar-powered Sun Torch for walking between the rooms & lodge facilities provides light in the rooms during load-shedding.

3. Meal Preparation

Our kitchen is equipped with gas oven & stove-top, so all your meal preparations are not hindered by the lack of power. Regular use of our Solar Cooker & Wonderbag further reduce our carbon footprint.

4. Dining Experience

Romantic candlelight & soft, solar lighting creates a romantic dining experience.

5. Wi-Fi & Mobile Signal

The reception & library have back-up wi-fi & a mobile phone signal booster should guests need any emergency communication.

6. Generator

We do have a back-up generator for early evening dinner preparations. This will be turned off from 22h30 – 07h00.

For any further questions, please contact the lodge
