

Disinfecting Bush Whisper Vehicles.

80% Alcohol Based.

We at Bush Whisper know how important it is since the COVID-19 outbreak for the need to disinfect our vehicles. With all the awkward nooks and corners in a bus's interior, it can be difficult to do a proper job without spending an inordinate amount of time and effort. Using the right agents and equipment will make the job more worthwhile.

We know that ultra violet rays from the sun is a good virus killer, but parking it in the sun will not have any effect here if windows are tinted with UV blocking technology!

Therefore after each, transfer or safari we make use of a 80% alcohol based sanitizer, following the below as a guideline.

- Interior
- Steering wheel
- Gear shift
- Turn indicator levers
- Dashboard
- Door handles
- All knobs and buttons
- Cup holders
- Key and remote control
- Cup holders
- Seat belts and buckles
- Seats
- Rear view mirror
